SU-36F2 (KV-36FS120/36FS320/38FS120 Only)

WARNINGS AND CAUTIONS

CAUTION

Short circuit the anode of the picture tube and the anode cap to the metal chassis, CRT shield, or carbon painted on the CRT, after removing the anode.

WARNING!!

An isolation transformer should be used during any service to avoid possible shock hazard, because of live chassis. The chassis of this receiver is directly connected to the AC power line.

SAFETY-RELATED COMPONENT WARNING!!

Components identified by shading and  mark on the schematic diagrams, exploded views, and in the parts list are critical for safe operation. Replace these components with Sony parts whose part numbers appear as shown in this manual or in supplements published by Sony. Circuit adjustments that are critical for safe operation are identified in this manual. Follow these procedures whenever critical components are replaced or improper operation is suspected.

ATTENTION!!

Après avoir déconnecté le cap de l'anode, court-circuiter l'anode du tube cathodique et celui de l'anode du cap au châssis métallique de l'appareil, ou la couche de carbone peinte sur le tube cathodique ou au blindage du tube cathodique.

Afin d'éviter tout risque d'électrocution provenant d'un châssis sous tension, un transformateur d'isolement doit être utilisé lors de tout dépannage. Le châssis de ce récepteur est directement raccordé à l'alimentation du secteur.

ATTENTION AUX COMPOSANTS RELATIFS A LA SECURITE!!

Les composants identifiés par une trame et par une marque  sur les schémas de principe, les vues explosées et les listes de pièces sont d'une importance critique pour la sécurité du fonctionnement. Ne les remplacer que par des composants Sony dont le numéro de pièce est indiqué dans le présent manuel ou dans des suppléments publiés par Sony. Les réglages de circuit dont l'importance est critique pour la sécurité du fonctionnement sont identifiés dans le présent manuel. Suivre ces procédures lors de chaque remplacement de composants critiques, ou lorsqu'un mauvais fonctionnement suspecte.

SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

1. Check the area of your repair for unsoldered or poorly soldered connections. Check the entire board surface for solder splashes and bridges.
2. Check the interboard wiring to ensure that no wires are "pinched" or touching high-wattage resistors.
3. Check that all control knobs, shields, covers, ground straps, and mounting hardware have been replaced. Be absolutely certain that you have replaced all the insulators.
4. Look for unauthorized replacement parts, particularly transistors, that were installed during a previous repair. Point them out to the customer and recommend their replacement.
5. Look for parts which, though functioning, show obvious signs of deterioration. Point them out to the customer and recommend their replacement.
6. Check the line cords for cracks and abrasion. Recommend the replacement of any such line cord to the customer.
7. Check the B+ and HV to see if they are specified values. Make sure your instruments are accurate; be suspicious of your HV meter if sets always have low HV.
8. Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

Leakage Test

Figure A. Using an AC voltmeter to check AC leakage.

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microamperes). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instructions.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low voltage scale. The Simpson's 250 and Sanwa SH-63TRD are examples of passive VOMs that are suitable. Nearly all battery-operated digital multimeters that have a 2 VAC range are suitable (see Figure A).

How to Find a Good Earth Ground

A cold-water pipe is a guaranteed earth ground; the cover-plate retaining screw on most AC outlet boxes is also at earth ground. If the retaining screw is to be used as your earth ground, verify that it is at ground by measuring the resistance between it and a cold-water pipe with an ohmmeter. The reading should be zero ohms.

If a cold-water pipe is not accessible, connect a 60- to 100-watt trouble- light (not a neon lamp) between the hot side of the receptacle and the retaining screw. Try both slots, if necessary, to locate the hot side on the line; the lamp should light at normal brilliance if the screw is at ground potential (see Figure B).

Figure B. Checking for earth ground.

SELF-DIAGNOSTIC FUNCTION

The units in this manual contain a self-diagnostic function. If an error occurs, the STANDBY/TIMER LED will automatically begin to flash. The number of times the LED flashes translates to a probable source of the problem. A definition of the STANDBY/TIMER LED flash indicators is listed in the instruction manual for the user's knowledge and reference. If an error symptom cannot be reproduced, the Remote Commander can be used to review the failure occurrence data stored in memory to reveal past problems and how often these problems occur.

Diagnostic Test Indicators

When an error occurs, the STANDBY/TIMER LED will flash a set number of times to indicate the possible cause of the problem. If there is more than one error, the LED will identify the first of the problem areas.

Results for all of the following diagnostic items are displayed on screen. No error has occurred if the screen displays a "0".

Diagnostic Item Description	No. of times STANDBY/ TIMER lamp flashes	Self-Diagnostic Display/ Diagnostic Result	Probable Cause Location	Detected Symptoms
Power does not turn on	Does not light	—————	- Power cord is not plugged in. - Fuse is burned out (F601). (A Board)	- Power does not come on. - No power is supplied to the TV. - AC Power supply is faulty.
+B overcurrent (OCP)*	2 times	2:0 or 2:1	- H.OUT (Q502) is shorted. (A Board) - IC702 is shorted. (C Board)	- Power does not come on. - Load on power line is shorted.
I-Prot	4 times	4:0 or 4:1	+13V is not supplied. (A Board) - IC561 is faulty. (A Board)	- Has entered standby state after horizontal raster. - Vertical deflection pulse is stopped. - Power line is shorted or power supply is stopped.
IK (AKB)	5 times	5:0 or 5:1	- IC001 is faulty. (M Board) - Screen (G2) is improperly adjusted.**	- No raster is generated. - CRT Cathode current detection reference pulse output is small.

*If a +B overcurrent is detected, stoppage of the vertical deflection is detected simultaneously. The symptom that is diagnosed first by the microcontroller is displayed on the screen.

**Refer to Screen (G2) Adjustments in Section 2-4. of this manual.

Display of Standby/Timer LED Flash Count

Diagnostic Item	Flash Count*
+B Overcurrent	2 times
I-Prot	4 times
IK (AKB)	5 times

*One flash count is not used for self-diagnostic.

Stopping the Standby/Timer LED Flash

Turn off the power switch on the TV main unit or unplug the power cord from the outlet to stop the STANDBY/TIMER LAMP from flashing.

Self-Diagnostic Screen Display

For errors with symptoms such as “power sometimes shuts off” or “screen sometimes goes out” that cannot be confirmed, it is possible to bring up past occurrences of failure on the screen for confirmation.

To Bring Up Screen Test

In standby mode, press buttons on the Remote Commander sequentially, in rapid succession, as shown below:

Display → Channel 5 → Sound Volume → Power ON

Note that this differs from entering the Service Mode (Sound Volume +).

Self-Diagnostic Screen Display

SELF DIAGNOSTIC		
2:	+B OCP	0
3:	+B OVP	N/A
4:	VSTOP	0
5:	AKB	1
101:	WDT	N/A

Numeral “0” means that no fault was detected.

Numeral “1” means a fault was detected one time only.

Handling of Self-Diagnostic Screen Display

Since the diagnostic results displayed on the screen are not automatically cleared, always check the self-diagnostic screen during repairs. When you have completed the repairs, clear the result display to “0”.

Unless the result display is cleared to “0”, the self-diagnostic function will not be able to detect subsequent faults after completion of the repairs.

Clearing the Result Display

To clear the result display to “0”, press buttons on the Remote Commander sequentially when the diagnostic screen is displayed, as shown below:

Channel 8 → ENTER

Quitting the Self-Diagnostic Screen

To quit the entire self-diagnostic screen, turn off the power switch on the Remote Commander or the main unit.

Self-Diagnostic Circuit

+B overcurrent (OCP)

Occurs when an overcurrent on the +B (135V) line is detected by pin 72 of IC001 (M Board). If the voltage of pin 72 of IC001 (M Board) is less than 1V when V.SYNC is more than seven verticals in a period, the unit will automatically turn off.

I-Prot

Occurs when an absence of the vertical deflection pulse is detected by pin 78 of IC001 (M Board). Power supply will shut down when waveform interval exceeds 2 seconds.

IK (AKB)

If the RGB levels* do not balance within 2 seconds after the power is turned on, this error will be detected by IC001 (M Board). TV will stay on, but there will be no picture.

*(Refers to the RGB levels of the AKB detection Ref pulse that detects 1K).

SECTION 1: DISASSEMBLY

1-1. REAR COVER REMOVAL (KV-27FS320 PICTURED)

1-2. CHASSIS ASSEMBLY REMOVAL

1-3. SERVICE POSITION (KV-27FS320 PICTURED)

- ① Press on catch tab to release A Board.
- ② Disconnect cables as needed to allow A Board to be removed.

1-4. PICTURE TUBE REMOVAL

WARNING: BEFORE REMOVING THE ANODE CAP

High voltage remains in the CRT even after the power is disconnected. To avoid electric shock, discharge CRT before attempting to remove the anode cap. Short between anode and CRT coated earth ground strap.

1. Discharge the anode of the CRT and remove the anode cap.
2. Unplug all interconnecting leads from the deflection yoke, neck assembly, degaussing coils and CRT grounding strap.
3. Remove the C Board from the CRT.
4. Remove the chassis assembly.
5. Loosen the neck assembly fixing screw and remove.
6. Loosen the deflection yoke fixing screw and remove.
7. Place the set with the CRT face down on a cushion and remove the degaussing coil holders.
8. Remove the degaussing coils.
9. Remove the CRT grounding strap and spring tension devices.
10. Unscrew the four CRT fixing screws [located on each CRT corner] and remove the CRT [Take care not to handle the CRT by the neck].

ANODE CAP REMOVAL PROCEDURE

WARNING: High voltage remains in the CRT even after the power is disconnected. To avoid electric shock, discharge CRT **before** attempting to remove the anode cap. Short between anode and coated earth ground strap of CRT.

NOTE: After removing the anode cap, short circuit the anode of the picture tube and the anode cap to either the metal chassis, CRT shield, or carbon painted on the CRT.

REMOVAL PROCEDURES

Turn up one side of the rubber cap in the direction indicated by arrow (a) .

Use your thumb to pull the rubber cap firmly in the direction indicated by arrow (b) .

When one side of the rubber cap separates from the anode button, the anode cap can be removed by turning the rubber cap and pulling it in the direction of arrow (c) .

HOW TO HANDLE AN ANODE CAP

1. Do not use sharp objects which may cause damage to the surface of the anode cap.
2. To avoid damaging the anode cap, do not squeeze the rubber covering too hard. A material fitting called a shatter-hook terminal is built into the rubber.
3. Do not force turn the foot of the rubber cover. This may cause the shatter-hook terminal to protrude and damage the rubber.

CABLE WIRE DRESSING

KV-27FS320 MODELS

Dress Right Speaker wire through DGC tie wrap and make a knot.

Fix AC-Cord to DGC using a DGC purse lock (4-081-411-02), Install purse lock beside DGC tie wrap as shown in picture.

- Dress left speaker wire through DGC tie wrap and make a knot as shown in picture
- Fix 3P connector (A~HN) to DGC using a 9mm purse lock (3-703-982-02).
- Fix 3P shielded connector (HM~HN) to DGC as shown in picture.

NOTE Install ferrite clamp (1-500-082-11) 60mm from

Dress DY's lead wire using a 9mm purse lock (3-703-982-02)

Dress G2 wire on rear bracket hook, twist DF wire.

Dress together focus lead and HV cable using (2) 5mm (3-703-981-02)

Dress CRT ground wires behind DGC and beside VD board

Fix DGC coils using (2) strain cables add 2 turns, hook cables on outer CRT hooks, Use 1 in upper coil and 1 in lower coil. Hook CRT ground wire (top) and springs(bottom) on outer hooks

Dress VM harness (A~VD) making a loop with a 9mm purse lock (3-703-982-01).

Install Ferrite clamp (1-500-082-11) 30mm from connector housing.

Dress 12P YUV connector (M~HM) with DGC tube and HM board grounding wires through standing purse lock (4-049-278-01). Install purse lock on HU board reference CLS1003 as shown in picture.

Fix 12P wire to bracket hook using a 9mm purse lock (3-703-982-02) from ferrite loop.

KV-32FS120/34FS120 MODELS

Dress right speaker wire through DGC's tie wrap.
Dress DGC lead wire with a 9mm purse lock

Dress left speaker wire through DGC's tie

For Chile model only
Dress right speaker wire through bottom board
purse lock making a loop.
Dress wire behind DGC as shown in picture.

Dress RGB harness over Rotation coil lead wire.
Dress Rotation coil lead wire over DY clip and
through rotation coil as shown in picture.

Dress VM and heaters harnesses over RGB
to avoid interference with back cover
installation.

Avoid this
area

Dress CRT ground wires under DGC and beside VD board at the middle as picture shows, keep away from focus and HV lead wires.

Dress G2 wire and DF wire as shown in picture.

Dress HV cable and focus wire together using a 5mm purse lock (3-703-981-02). Install purse lock over carbon paint edge.

Dress DY lead wire with a 9mm purse lock (3-703-982-02)

**Dress AC-Cord into CRT support hook as shown in picture.
Dress 12P video harness through bottom board's purse locks and under AC-Cord. Uninstall purse locks as shown in picture.
Dress lightning wire under 12P harness.**

KV-32FS320 MODELS

**Dress right speaker wire through DGC's tie wrap.
Fix AC-Cord to DGC tie wrap using a 9mm purse lock (3-703-982-02) as shown in picture.**

Dress left speaker wire through DGC's tie wrap.

Dress RGB harness over Rotation coil lead wire.
Dress Rotation coil lead wire over DY clip.

Dress VM and heaters harnesses RGB and
12P harness (HM), and behind RGB,
(Refer to picture).

Dress HV and focus lead wire together using a 5 mm
purse lock (3-703-981-02) as shown in picture.

Install purse lock (4-081-411-02) using carbon
paint as reference

Dress DGC lead wire using a 9mm purse lock (3-703-982-02).

Dress DY lead wire with a 9mm purse lock (3-703-982-02) .

Dress HM board grounding wires, HR harness and HU 12P harness together into standing purse lock, dress 12P YUV harness (M-HM board) with DGC tube behind purse lock and under 6P HR and 12P HU harnesses.

NOTE install purse lock (4-072-499-31) as in picture.

Dress HM board grounding wires, A board lightning wire, 12P video harness (M~HU board) and 12P (HM~M) together into standing purse lock.

NOTE install purse lock (4-072-499-31) as in picture

**Dress G2 wire inside FBT bracket , behind A/V bracket hook (from behind) and make a loop.
Dress DFT wire making a loop.**

Dress 3P connector from HM~HN board through HM board bracket hook as in picture.

KV-36FS120/38FS120 MODELS

**Dress right speaker wire through DGC band.
Dress DGC lead wire with a 9mm purple lock**

Dress left speaker wire through DGC band

**Dress RGB harness over Rotation coil lead wire.
Dress Rotation coil lead wire over DY clip and
through rotation coil as shown in picture.**

**Dress earth ground wires under DGC and
over VD board.**

Bend H-Stat wire towards C board.

**Dress G2 wire and DF wire as shown in picture.
Dress heaters and VM harnesses on the left side
of DY lead wire**

**Dress HV cable and focus wire together using a
5mm purse lock, install purse lock 150mm±10
from rubber cap .**

**Dress HV through standing holder, install holder
on CRT's carbon paint edge**

**Dress DY lead wire with a 9mm purse
lock (3-703-982-02)**

**Dress AC-Cord into CRT support hook using a 9mm purse lock as shown in picture.
Dress 12P video harness through bottom board's purse locks and under AC-Cord. Install purse locks as shown in picture.
Dress lightning wire under 12P harness.**

KV-36FS320 MODELS

Dress right speaker wire through DGC band.

Fix AC-Cord to DGC using a DGC purse lock (4-081-411-02) as shown in picture, use carbon paint as reference.

Dress left speaker wire through DGC band.

Using a 9mm purse lock (3-703-982-02) fix 3P connector (A~HN) to DGC band.

Dress RGB harness over Rotation coil lead wire.
Dress Rotation coil lead wire over DY clip.

NOTE: Install Rotation coil with label at the middle point.

Avoid wires to touch
LFT or any other
primary components.

Using a 9mm purse lock (3-703-982-02) dress 12P harness (M~HU), A~HM board grounding wires and HR board harness.

On standing purse lock (4-049-278-01) dress 12P harness (M~HM), 12P harness (M~HU), A~A board lightning wire and A~HM board grounding wires.

Dress HV and focus lead wire together with a 5mm purse lock (3-703-981-02).
Install purse lock 150mm from rubber cap.

Install holder (4-089-469-11) using carbon paint as reference

Fix DGC lead wire to DGC band using a 9mm purse lock (3-703-982-02)

Dress DY lead wire with a 9mm purse lock (3-703-982-02)

Dress G2 wire inside FBT bracket, on A/V bracket hook (from behind) and make a loop.
Dress DFT wire making a loop.

Avoid wires to touch LFT or any other primary components. Dress grounding wires over 12P harness.

On HU purse locks CLS1006 and CLS1007 (4-049-278-01 x 2) dress 12P harness (M~HM) and A~HM board grounding wires.

NOTE dress grounding wires over 12P harness.

**Dress G2 wire inside FBT bracket,
behind A/V bracket hook (from behind)
and make a loop.
Dress DFT wire making a loop.**

**Dress 3P connector from HM~HN board through
hook as in picture.
Install ferrite 60mm from housing**

**Dress CRT ground wires under DGC and beside
VD board at the middle as picture shows, keep
away from focus and HV lead wires.**

**Bend H-Stat wire towards
C board.**

SECTION 2: SET-UP ADJUSTMENTS

The following adjustments should be made when a complete realignment is required or a new picture tube is installed.

These adjustments should be performed with rated power supply voltage unless otherwise noted.

Set the controls as follows unless otherwise noted:

VIDEO MODE: Pro

PICTURE CONTROL: Normal

BRIGHTNESS CONTROL: Normal

Perform the adjustments in order as follows:

1. Beam Landing
2. Convergence
3. Focus
4. Screen (G2)
5. White Balance

Note Test Equipment Required:

1. Color Bar Pattern Generator
2. Degausser
3. DC Power Supply
4. Digital Multimeter

2-1. BEAM LANDING

Before beginning adjustment procedure:

1. Feed in the white pattern signal.

ADJUSTMENT PROCEDURE

1. Input a raster signal with the pattern generator.
2. Loosen the deflection yoke mounting screw, and set the purity control to the center as shown below:

3. Turn the raster signal of the pattern generator to green.
4. Move the deflection yoke backward, and adjust with the purity control so that green is in the center and red and blue are even on both sides.

5. Move the deflection yoke forward, and adjust so that the entire screen becomes green.

6. Switch over the raster signal to red and blue and confirm the condition.
7. When the position of the deflection yoke is determined, tighten it with the deflection yoke mounting screw.
8. If landing at the corner is not right, adjust by using the disk magnets.

2-2. CONVERGENCE

Before starting convergence adjustments:

1. Perform FOCUS, VLIN and VSIZE adjustments.
2. Set BRIGHTNESS control to minimum.
3. Feed in dot pattern.

VERTICAL STATIC CONVERGENCE

1. Adjust V. STAT magnet to converge red, green and blue dots in the center of the screen.

2. Tilt the V. STAT magnet and adjust static convergence to open or close the V. STAT magnet.

When the V. STAT magnet is moved in the direction of arrow a and b, red, green, and blue dots move as shown below:

HORIZONTAL STATIC CONVERGENCE

If the blue dot does not converge with the red and green dots, perform the following:

1. Move H STAT VR magnet (a) to correct insufficient H.Static convergence.

DYNAMIC CONVERGENCE ADJUSTMENT

Before performing this adjustment, perform Horizontal and Vertical Static Convergence Adjustment.

1. Slightly loosen deflection yoke screw.
2. Remove deflection yoke spacers.
3. Move the deflection yoke for best convergence as shown below:

4. Tighten the deflection yoke screw.
5. Install the deflection yoke spacers.

TLH PLATE ADJUSTMENT

1. Input crosshatch pattern.
2. Adjust PICTURE QUALITY to standard, PICTURE and BRIGHTNESS to 50%, and OTHER to standard.
3. Adjust the Horizontal Convergence of red and blue dots by tilting the TLH plate on the deflection yoke.

4. Adjust XCV core to balance X axis.
 5. Adjust YCH VR to balance Y axis.
 6. Adjust vertical red and blue convergence with V.TILT (TLV VR.)
- Note: Perform adjustment 3-6 while tracking items 1 and 2.

SCREEN-CORNER CONVERGENCE

1. Affix a permalloy assembly corresponding to the misconverged areas:

2-3. FOCUS

1. Adjust FOCUS control for best pictures.

2-4. SCREEN (G2)

1. Input a dot pattern.
2. Set the PICTURE and BRIGHTNESS controls at minimum and COLOR control at normal.
3. Adjust SBRT, GCUT, BCUT in service mode with an oscilloscope as shown below so that voltages on the red, green, and blue cathodes are $172 \pm 2\text{VDC}$.

4. Observe the screen and adjust SCREEN (G2) VR in FBT to obtain the faintly visible background of dot signal.

2-5. METHOD OF SETTING THE SERVICE ADJUSTMENT MODE

SERVICE MODE PROCEDURE

1. Standby mode (power off).
2. Press **Display** → Channel **5** → Sound Volume **+** → Power on the Remote Commander (press each button within a second).

SERVICE ADJUSTMENT MODE ON

1. The CRT displays the time being adjusted.

2. Press **1** or **4** on the Remote Commander to select the time.
3. Press **3** or **6** on the Remote Commander to change the data.
4. Press **MUTING** then **ENTER** to save into the memory.

SERVICE ADJUSTMENT MODE MEMORY

Turn the set off then on to exit Service Adjustment Mode.

2-6. WHITE BALANCE ADJUSTMENTS

1. Input an entire white signal with burst.
2. Set to Service Adjustment Mode.
3. Set the PICTURE and BRIGHTNESS to minimum.
4. Adjust with SBRT if necessary.
5. Select GCUT and BCUT with **1** and **4**.
6. Adjust with **3** and **6** for the best white balance.
7. Set the PICTURE and BRIGHTNESS to maximum.
8. Select GDRV and BDRV with **1** and **4**.
9. Adjust with **3** and **6** for the best white balance.
10. Press **MUTING** then **ENTER** to save into the memory.

SECTION 3: SAFETY RELATED ADJUSTMENTS

3-1. R530, R531 CONFIRMATION METHOD (HV HOLD-DOWN CONFIRMATION) AND READJUSTMENTS

The following adjustments should always be performed when replacing the following components which are marked with  on the schematic diagram:

Part Replaced ()	Adjustment ()
C531, C532, D519, D520, D521, IC501, IC600, PH602, R529, R530, R531, R532, R533, R550, T503 (FBT), T504 (DFT)	HV HOLD-DOWN R530, R531

PREPARATION BEFORE CONFIRMATION

- Using a Variac, apply AC input voltage: 120 +/- 2.0 VAC.
- Turn the POWER switch ON.
- Input a white signal and set the PICTURE and BRIGHT controls to maximum.
- Confirm that the voltage of more than 23.0 VDC appears between TP85 and ground on the A Board.

HOLD-DOWN OPERATION CONFIRMATION

- Connect the current meter between Pin 11 of the FBT (T503) and the PWB land where Pin 11 would normally attach. (See Figure 1).
- Input a dot signal and set PICTURE and BRIGHTNESS to minimum: IABL = $2175 + 100/-325 \mu\text{A}$.
- Confirm the voltage of A Board TP91 is $134.6 \pm 1.0 \text{ VDC}$.
- Connect the digital voltmeter and the DC power supply to TP85 and ground. (See Figure 1).
- Increase the DC power voltage gradually until the picture blanks out.
- Turn DC power source off immediately.
- Read the digital voltmeter indication:
KV-27FS320 Only (standard = $24.78 + 0.0/-0.1 \text{ VDC}$).
All except KV-27FS320 (standard = $27.24 + 0.0/-0.1 \text{ VDC}$).
- Input a white signal and set PICTURE and BRIGHTNESS to maximum: IABL = $2175 + 100/-325 \mu\text{A}$.
- Repeat steps 4 to 7.

HOLD-DOWN READJUSTMENT

If the setting indicated in Step 2 of Hold-Down Operation Confirmation cannot be met, readjustment should be performed by altering the resistance value of R530, R531 component marked with .

Figure 1

3-2. B+ VOLTAGE CONFIRMATION AND ADJUSTMENT

Always perform the following adjustments when replacing the following components, which are marked with  on the schematic diagram on the A Board:

Adjustment ()
A BOARD IC600, PH602

- Using a Variac, apply AC input voltage: $130 + 2.0/-0.0 \text{ VAC}$
- Input a monoscope signal.
- Set the PICTURE control and the BRIGHT control to minimum.
- Confirm the voltage on A Board between TP23 and ground is less than 136.5 VDC.
- If step 4 is not satisfied, replace R530 and R531 on A Board and repeat the above steps.

SECTION 4: CIRCUIT ADJUSTMENTS

ELECTRICAL ADJUSTMENTS BY REMOTE COMMANDER

Use the Remote Commander (RM-Y195, RM-Y196) to perform the circuit adjustments in this section.

Test Equipment Required: 1. Pattern generator 2. Frequency counter 3. Digital multimeter 4. Audio oscillator

4-1. SETTING THE SERVICE ADJUSTMENT MODE

- Standby mode (Power off).
- Press the following buttons on the remote commander within a second of each other:
Display → **Channel 5** → **Sound Volume +** → **Power**

SERVICE ADJUSTMENT MODE ON

- The CRT displays the item being adjusted.

- Press **1** or **4** on the Remote Commander to select the item.
- Press **3** or **6** on the Remote Commander to change the data.
- Press **MUTING** then **ENTER** to write into memory.

SERVICE ADJUSTMENT MODE MEMORY

- Press **8** then **ENTER** on the Remote Commander to initialize.

Carry out Step 1 when adjusting IDs 0-7 and when replacing and adjusting IC002

- Press **MUTING** then **ENTER** to write into memory.
- Turn set off then on to exit Service Adjustment Mode.

4-2. MEMORY WRITE CONFIRMATION METHOD

- After adjustment, pull out the plug from the AC outlet, then replace the plug in the AC outlet again.
- Turn the power switch ON and set to Service Mode.
- Call the adjusted items again to confirm they were adjusted.

4-3. REMOTE ADJUSTMENT BUTTONS AND INDICATORS

RM-Y195

4-6. A BOARD ADJUSTMENTS

H. Frequency (Free Run) Check

1. Input a TV mode (RF) with no signal.
2. Connect a frequency counter to base of Q501 (TP-25 H. DRIVE) on the A Board.
3. Check H. Frequency for 15735 ± 200 Hz.

V. Frequency (Free Run) Check

1. Select video 1 with no signal input.
2. Set the conditions for a standard setting.
3. Connect the frequency counter to TP-27 (V OUT) or CN501 pin ⑥ (V DY+) and ground on the A Board .
4. Check that V. Frequency shows 60 ± 4 Hz.

Drive (SCON)

1. Input a color-bar signal and set the level to 75%.
2. Set in Pro mode + PICTURE MAX.
3. Activate the Service Adjustment Mode.
4. Set GON and BON items. Using ③ and ⑥ set each to the following values. Leave RON set to "1".

5. Connect an oscilloscope probe to C Board, CN705 pin3 (KR).
6. Select SCON with ① and ④.
7. Adjust the value of SCON with ③ and ⑥ for $92 \pm 2V_{pp}$.

8. Reset GON and BON values to "1".

R ON:	ON	(1)
G ON:	ON	(1)
B ON:	ON	(1)

9. Press **[MUTING]** then **[ENTER]** to save into the memory.

Display Position Adjustment (DISP)

1. Input a color-bar signal.
2. Set to Service Adjustment Mode.
3. Select DISP with ① and ④.
4. Adjust values of DISP with ③ and ⑥ to adjust characters to the center.
5. Press **[MUTING]** then **[ENTER]** to save into the memory.
6. Check to see if the text is displayed on the screen.

Sub Bright Adjustment (SBRT)

1. Input a monoscope signal.
2. Activate the Service Adjustment Mode.
3. Set the PICTURE and BRIGHTNESS to minimum.
4. Select the SBRT item with ① and ④.
5. Adjust the values of SBRT with ③ and ⑥ to obtain a faintly visible 20 IRE mark, after that increase +3 steps.
6. Press **[MUTING]** then **[ENTER]** to save into the memory.

Sub Hue, Sub Color Adjustment (SHUE, SCOL)

1. Input color-bar signal at 75%.
2. Activate the Service Adjustment Mode.
3. Set (PIC) to Max and (COL) to 50%.
4. Connect an oscilloscope probe to C Board, CN705 pin ④ (Blue Out).
5. Select the SHUE and SCOL item with ① and ④.
6. While showing the SHUE item, adjust the waveform with ③ and ⑥ until the second and third bars show the same level ($V_2 = V_3 < 0.15V_{p-p}$). Set Sub Hue -2 Step.
7. While showing the SCOL item, adjust the waveform with ③ and ⑥ until the first and fourth bars show the same level ($V_1 = V_4 < 0.15V_{p-p}$). Set Sub Col + 2 Step.

8. Press **[MUTING]** then **[ENTER]** to save into the memory.

V. Size Adjustment (VSIZ)

1. Input a crosshatch signal.
2. Activate the Service Adjustment Mode.
3. Select the VSIZ item with **1** and **4**.
4. Adjust value of VSIZ with **3** and **6** for the best vertical size.
5. Press **MUTING** then **ENTER** to save into the memory.

V. Center Adjustment (VPOS)

Perform this adjustment after performing H. Frequency (Free Run) Check.

1. Input a crosshatch signal.
2. Activate the Service Adjustment Mode.
3. Select the VPOS item with **1** and **4**.
4. Adjust value of VPOS with **3** and **6** for the best vertical center.
5. Press **MUTING** then **ENTER** to save into the memory.

H. Center Adjustment (HPOS)

Perform this adjustment after performing H. Frequency (Free Run) Check.

1. Input a crosshatch signal.
2. Activate the Service Adjustment Mode.
3. Select the HPOS item with **1** and **4**.
4. Adjust the value of HPOS with **3** and **6** for the best horizontal center.
5. Press **MUTING** then **ENTER** to save into the memory.

H. Size Adjustment (HSIZ)

1. Input a monoscope signal.
2. Activate the Service Adjustment Mode.
3. Select HSIZ with **1** and **4**.
4. Adjust with **3** and **6** for the best horizontal size.
5. Press **MUTING** then **ENTER** to save into the memory.

V. Linearity (VLIN), V. Correction (SCOR), PIN Amp (PAMP), and Horizontal Trapezoid (HTRP) Adjustments

1. Input a crosshatch signal.
2. Activate the Service Adjustment Mode.
3. Select VLIN, SCOR, PAMP, and HTRP with with **1** and **4**.
4. Adjust with **3** and **6** for the best horizontal size.
5. Press **MUTING** then **ENTER** to save into the memory.

V LINEARITY (VLIN)

V CORRECTION (SCOR)

PIN AMP (PAMP)

HORIZONTAL TRAPEZOID (HTRP)

V. Angle (VANG), V. Bow (VBOW), Upper PIN (UPIN) and Low PIN (LPIN) Adjustments

- 1. Input a crosshatch signal.
- 2. Activate the Service Adjustment Mode.
- 3. Select VANG, VBOW, UPIN, and LPIN with [1] and [4].
- 4. Adjust with [3] and [6] for the best picture.
- 5. Press [MUTING] then [ENTER] to save into the memory.

Service Adjustment Mode Memory

- 1. After completing all adjustments, press [0] then [ENTER].
Read From Memory

SECTION 5: DIAGRAMS

5-1. CIRCUIT BOARDS LOCATION

The components identified by shading and  symbol are critical for safety. Replace only with part number specified.

The symbol  indicates a fast operating fuse and is displayed on the component side of the board. Replace only with fuse of the same rating as marked.

All voltages are in V.

S : Measurement impossibility.

 : B-line.

(Actual measured value may be different).

 : signal path. (RF)

Circled numbers are waveform references.

The components identified by  in this basic schematic diagram have been carefully factory-selected for each set in order to satisfy regulations regarding X-ray radiation. Should replacement be necessary, replace only with the value originally used.

When replacing components identified by , make the necessary adjustments as indicated. If the results do not meet the specified value, change the component identified by  and repeat the adjustment until the specified value is achieved.

(Refer to Section 3: Safety Related Adjustments on Page 27.)

When replacing the parts listed in the table below, it is important to perform the related adjustments.

Part Replaced ()	Adjustment ()
C531, C532, D519, D520, D521, IC501, IC600, PH602, R529, R530, R531, R532, R533, R550, T503 (FBT), T504 (DFT)	HV HOLD-DOWN R530, R531

5-2. PRINTED WIRING BOARD AND SCHEMATIC DIAGRAM INFORMATION

All capacitors are in μF unless otherwise noted. pF : μF 50VV or less are not indicated except for electrolytics and tantalums.

All electrolytics are in 50V unless otherwise specified.

All resistors are in ohms. k=1000, M=1000k

Indication of resistance, which does not have one for rating electrical power, is as follows: Pitch : 5mm Rating electrical power :

$\frac{1}{4}$ W in resistance, $\frac{1}{10}$ W and $\frac{1}{8}$ W in chip resistance.

 : nonflammable resistor.

 : fusible resistor.

 : internal component.

 : panel designation and adjustment for repair.

 : earth ground

 : earth-chassis

All variable and adjustable resistors have characteristic curve B, unless otherwise noted.

Readings are taken with a color-bar signal input.

Readings are taken with a 10M digital multimeter.

Voltages are DC with respect to ground unless otherwise noted.

Voltage variations may be noted due to normal production tolerances.

SECTION 6: EXPLODED VIEWS

Components not identified by a part number or description are not stocked because they are seldom required for routine service.

The component parts of an assembly are indicated by the reference numbers in the far right column of the parts list and within the dotted lines of the diagram.

* Items marked with an asterisk are not stocked since they are seldom required for routine service. Expect some delay when ordering these components.

NOTE: The components identified by shading and ⚠ mark are critical for safety. Replace only with part number specified.

NOTE: Les composants identifiés par un trame et une marque ⚠ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

SECTION 7: ELECTRICAL PARTS LIST

NOTE: The components identified by shading and  mark are critical for safety. Replace only with part number specified.

NOTE: Les composants identifiés par un trame et une marque  sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

The components in this manual identified by the following symbol:  indicate parts that have been carefully factory-selected to satisfy regulations regarding X-ray radiation for each set.

Should replacement be required for one of these components, replace only with the value originally used.

* Items marked with an asterisk are not stocked since they are seldom required for routine service. Expect some delay when ordering these components.

RESISTORS

- All resistors are in ohms
- F : nonflammable
- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.

When ordering parts by reference number, please include the board name.

- * **A-1057-457-A A BOARD, COMPLETE**
(KV-27FS320 ONLY)
- * **A-1302-981-A A BOARD, COMPLETE**
(KV-32FS120/36FS120/38FS120 ONLY)
(KV-34FS120 L. NORTH ONLY)
- * **A-1056-321-A A BOARD, COMPLETE**
(KV-34FS120 L. SOUTH ONLY)
- * **A-1058-449-A A BOARD, COMPLETE**
(KV-32FS320/36FS320 ONLY)

The high-voltage leads associated with the FBT on the A board are not included and must be ordered separately. Order the following leads when requesting this A Board:

	1-251-715-22	CAP ASSY, HIGH-VOLTAGE
	1-900-800-82	WIRE ASSY, FOCUS
	1-900-803-22	WIRE ASSY, G2 LEAD

- * 4-374-846-11 COVER, CAPACITOR, CAP TYPE
- 4-382-854-11 SCREW (M3X10), P, SW (+)

NOTE: The components identified by shading and  mark are critical for safety. Replace only with part number specified.

A component identified by this  symbol indicates that it has been carefully factory-selected to satisfy regulations regarding X-ray radiation. Should replacement be required, replace only with the value originally used.

Due to the complexity of this board, performing component level field repairs is not recommended. If service is required, complete board replacement is the preferred repair method. Data is provided for reference only.
